

School Psychology Laboratory

About the Laboratory

The researchers in the School Psychology Laboratory are concerned with the improvement of school environment and the exploration of psychological mechanisms that influence teaching/learning and the positive development of students. We are also concerned about how parenting contributes to the growth of children.

Research topics

We raise questions such as: What teaching practices facilitate students' learning? What would make students be more motivated? What teachers' feedback will enhance students' self-efficacy? What contribute to student engagement in school? What are the evidence-based interventions for the social-emotional development of students? How can positive psychology be used in education? What training instills compassion in student leaders? How is Chinese parenting different from parenting in Western cultures? What role does autonomy granting play in Chinese parenting? How can positive psychology be integrated with parent education?

Research Internship Opportunities

We welcome research interns who are eager to learn more about the above topics to join us. For details of the recruitment of research interns, please see <http://www.psychology.hku.hk/index.php?id=1266>

Contact Us

We are in Rm 652, Jockey Club Tower. For enquiry, you may contact Dr. Shui-fong Lam by e-mail lamsf@hku.hk
