NEUROSCIENCE is the interdisciplinary study of the brain. In particular, this programme focuses on the neural mechanisms underlying behavior, cognition, and perception in humans, both in health and disease (although students will be exposed to findings from animal studies as well). Students will be given rigorous academic training, from a variety of disciplines, to prepare them for further studies and research, as well as to be able to eventually translate the relevant knowledge into practical applications. Apart from the traditional research and medical careers such as neurobiology, neurology, cognitive neuroscience, etc., there are other areas such as computer science, education, machine learning, artificial intelligence, public policy, medicine, and pharmacology, etc., which also benefit from a background in neuroscience.
WHO TO APPLY?

The major# option/minor option is open to all HKU undergraduates. Students are required to have Level 3/above in HKDSE Biology, Chemistry or Combined Science OR equivalent courses (subject to the approval from the Department of Psychology), before enrolling in the neuroscience core courses.

(#Neuroscience programme could only be taken as a multidisciplinary / second major)

* Candidates who opt to declare two major programmes offered by the Faculty of Social Sciences should avoid selecting overlapping pre-requisites.

WHAT COURSES YOU CAN CHOOSE TO TAKE?

(EXAMPLES OF ADVANCED COURSES)

- PSYC2101. Foundations of neuroscience.................................................................(6 credits)
- PSYC2102. Seminar in neuroscience...........................................................................(6 credits)
- PSYC3054. Human neuropsychology.................................................................(6 credits)
- PSYC2110. Developmental neuroscience...........................................................(6 credits)
- PSYC2111. Neurobiological basis of psychological issues...........................................(6 credits)
- PSYC2112. Research internship in neuroscience.....................................................(6 credits)
- PSYC2113. Introduction to brain imaging.........................................................(6 credits)
- PSYC4101. Thesis in neuroscience............................................................................(12 credits)
- BBMS3011. Molecular neuroscience...........................................................................(6 credits)
- BIOL3105. Animal physiology & environmental adaptation...........................................(6 credits)
- BBMS2003. Human genetics...................................................................................(6 credits)
- BMED3501. Medical imaging...................................................................................(6 credits)
- PSYC2007. Cognitive psychology............................................................................(6 credits)
- PSYC2051. Perception............................................................................................(6 credits)
- PSYC3061. Advanced issues in perception.............................................................(6 credits)
- PSYC3068. Advanced cognitive psychology.............................................................(6 credits)
- PSYC4102. Capstone project in neuroscience.........................................................(6 credits)

(*For courses offered in 2019/20, please visit our website: https://www.psychology.hku.hk/?page_id=1619 )

WHY?

The objectives of the programme are to:

♦ provide students with exposure to and a fundamental understanding of neuroscience and its related fields in a multi-disciplinary approach

♦ develop students’ ability to critically analyze scientific research

♦ equip students with basic theoretical and methodological training that enable their successful pursuit of further study at the postgraduate level in neuroscience or related disciplines

♦ enhance students’ awareness of social issues as the neuroscience training will equip them with the background to understand controversies in neuroscience or related disciplines.
